Response to Arguments

The rejection of claims 34-65 under 35 U.S.C. 103(a) is overcome by applicant's statement filed 4/21/05 that description of the electrochemical mechanical deposition (ECMD) process in the background of the present application is not "admitted prior art" because the subject matter of the present application and all of the referenced applications in the background section of the present application were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person. See MPEP § 706.02(l)(1) and § 706.02(l)(2).

Allowable Subject Matter

Claims 34-65 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach or render obvious a method for detecting planarization of a top surface of a workpiece with features in an electrochemical mechanical deposition process that uses a solution containing a conductor therein and operates upon the top surface comprising: depositing the conductor to fill the features within the top surface of the workpiece using electrochemical mechanical deposition employing a workpiece surface influencing device, an applied potential and the solution; transmitting a beam of light onto the top surface of the workpiece to obtain a reflected beam of light, a characteristic of the reflected beam of light being altered by a top surface pattern that exists due to the features within the top surface of the workpiece; and detecting, during electrochemical mechanical deposition, a change in the characteristic of the reflected beam of light indicative of a degree of planarization to the top surface of the workpiece.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
